The Frame Shop — Your Photos & Videos

Sep 29, 2026 · @Otis Williams

Paul, this guide shows how to put your own photos and videos on the website, and how to use them in your marketing posts. You do all of it yourself from your Command Center, on your phone or computer. You don't need Otis for any of it.

How it fits together

Your pictures show up in five places. Each one has its own control:

What customers see	Where you change it	Where it's kept
The still shown before the homepage video plays	Owner Photo Control, section 1	On your website
Your photo in "About Paul"	Owner Photo Control, section 2	On your website
The four case-study photos in "Our Work"	Owner Photo Control, section 3	On your website

What customers see	Where you change it	Where it's kept
Shop videos on the homepage	Owner Photo Control, section 4	Your video storage, or YouTube/Vimeo
Photos and clips in your social posts	Marketing, on each draft	Only on your phone, until you post it yourself

To get there: open the website, scroll to the bottom, tap **Owner Login**, enter your PIN, then tap the **Owner Photo Control** tab.

When you save a photo, **every visitor sees it straight away**. There's no separate publish step. You can always change it back.

You don't need to edit your photos first. The website crops, sharpens and resizes each one for the spot it goes in, so a straight-from-the-phone shot is fine.

The homepage still and your photo

Section 1: the still before the homepage video

The top of the homepage plays the bike video beside "Zero Tolerance. Pure Alignment." This photo shows in the video's place for the moment before it starts, and on any phone that can't play video. Out of the box it's the video's own first frame, so you never have to change it.

1. In **Owner Photo Control**, find **section 1, Homepage Still**.
2. Under **Option A: Upload Hero Image from Device**, tap the upload box and pick a photo from your phone or computer.
3. Wait a moment while it's prepared. A ✓ message next to the section title confirms it's saved.
4. Open the website in another tab (or on another phone) to see it.

Best photo: a wide, landscape shot of a bike on a dark background, so it blends into the black around the video. The site always shows the whole photo, so wheels never get cut off.

Other options:

- **Option B: Paste Web Image URL** uses a photo that's already online. Uploading is better: if that site ever removes the picture, it disappears from yours too.

- **Remove photo (use the video's first frame)** puts the video's own first frame back.

Section 2: your photo in "About Paul"

1. Find **section 2, Your Photo**.
2. Under **Option A: Upload New Photo from Device**, pick a photo of yourself.
3. The ✓ message next to the section title confirms it's saved.

Best photo: an upright (portrait) photo of you in the shop, from the chest up, in good light. It shows tall, not wide.

Reset Paul's Photo to Default puts the original picture back.

Case-study photos ("Our Work")

The "Our Work" section shows four jobs, each with a photo, the problem, the before-and-after measurements, and what you did. **Right now these use stock photos.** Replacing them with pictures of your real jobs is the single biggest improvement you can make to the site.

1. Find **section 3, Case Study & Work Gallery Photos**. Each of the four jobs is listed with its current photo.
2. On the job you want to change, tap **Upload File** and pick your photo.
3. The button shows **Optimizing…** while it's prepared, then the new photo appears in the list and on the website.
4. **Reset to Default** on a job puts its original photo back.

Best photo: the bike on the jig or lift, landscape, with the work visible. A clear before-and-after pair is ideal: use the "after" here and the "before" in a social post.

Changing the words: the text of each case study (the bike, the problem, the measurements) is part of the site itself, not a photo setting. If a case study isn't one of your real jobs, send Otis the real details (bike, what was wrong, what you measured, what you did) and he'll replace it.

Shop videos

Your own shop videos appear in their own section further down the homepage. The section stays hidden until you add your first video. You can add videos two ways.

Way 1: upload a video straight from your phone or computer

1. Find **section 4** in Owner Photo Control.
2. Tap the box that says **Drop a video here** and pick a video (on a computer you can also drag it onto the box).
3. A progress bar fills up. **Keep the window open until it reaches 100%.** On shop wi-fi a long clip can take a few minutes.
4. When it finishes, the video is live on the website. Its name comes from the file name.

Good to know:

- The limit is **200 MB per video**. A short clip filmed at normal (1080p) quality fits easily. 4K video fills 200 MB in under a minute, so film at 1080p (iPhone: **Settings → Camera → Record Video**) or use YouTube (Way 2) for long clips. The site tells you if a file is too big.
- Film **upright** for the homepage. Upright videos get a tall, phone-shaped frame.
- Videos start playing silently, and visitors tap for sound. Only one plays with sound at a time.
- Some iPhone videos play on iPhones but not on Android phones. The site checks each file and tells you if it has that problem. The fix: open the video in **iMovie → Share → Export File**, then upload the copy iMovie makes.

Way 2: add a video that's on YouTube or Vimeo

Best for long videos, and for videos you've already posted.

1. Put the video on YouTube. If you don't want it on your channel, set it to **Unlisted**.
2. Copy its link from YouTube's Share button.
3. In section 4, tap **Already on YouTube? Add it by link instead**.
4. Paste the link, give the video a name (for example "Road Glide frame straightening"), then tap **Put It On The Website**.

Reorder or remove videos

- The **up and down arrows** next to each video change the order on the homepage.
- The **bin icon** takes a video off the website. If you uploaded it (Way 1), the file is deleted too, so it stops using storage. YouTube videos stay on YouTube.

Photos and videos for your social posts

The marketing assistant writes your posts. You add the picture. Before approving a post, you can see exactly how it'll look on the phone.

1. Open the **Marketing** tab. Drafts waiting for you are under **To approve**.
2. Each Instagram, Facebook, TikTok or Google draft says what to shoot: a **Photo** idea, or for TikTok a **Video to film** plan, shot by shot.
3. Take the photo, or film the clip upright on your phone.
4. On the draft, tap **Preview on phone**, then **Add photo / video**, and pick what you just shot.
5. The draft now shows inside a phone screen laid out like that app: square for Instagram, full-screen for TikTok, and so on.
6. Edit the words in the draft box if needed. The preview changes as you type. It also warns you if a post is too long for Instagram or Google.
7. Happy with it? Tap **Approve**, then **Copy** the text, open the app (Instagram, TikTok…), post your photo or video with the copied text, then come back and tap **Mark posted**.

Your photo or video stays on your phone. The preview doesn't upload it anywhere. The assistant never posts for you: you post it yourself in the app, so nothing goes out that you haven't seen.

Tips for good shop photos and clips

- **Light:** shoot near the open bay door or under the shop lights, not into a window.
- **Show the work:** the bike on the jig, the laser line, the gauge reading, the finished bike. Real work is what makes riders trust a shop.
- **Keep it tidy:** a quick sweep of the background makes a big difference.
- **Customers' bikes:** ask the owner before posting a photo where their plate or face shows.
- **Film upright** for TikTok, Instagram and the homepage. Hold the phone steady, or lean on the bench.

Trying it in the demo

Everything in this guide works in the demo, with one difference: **what you add is saved only on the phone or computer you're using**. Nobody else sees it, and it isn't kept anywhere else. It's for practice. On the real site, your changes show for every visitor.

If something doesn't work

What happened	What to do
I changed a photo but the site still shows the old one	Reload the page. On a Mac, hold Command and Shift and press R.
It says the website isn't set up to hold video files	Video file storage isn't switched on yet. Use YouTube (Way 2) for now, and ask Otis to switch it on.
It says the video is too big	Film at 1080p instead of 4K, trim it, or use YouTube (Way 2).
It says the video won't play on some phones	Open it in iMovie → Share → Export File, and upload that copy.
A YouTube video shows a blank box	Whoever posted it has blocked it from playing on other sites. Use a different video, or post your own copy.
Anything else	Take a screenshot, note what you tapped, and send both to Otis: otis@meridianinterface.com · (281) 882-9198
