The Frame Shop — Handoff Plan

Sep 29, 2026 · @Otis Williams

Paul, the website is built and tested. This plan covers the few steps left before it goes live, what we need from you, and what running it involves. Nothing here needs technical knowledge. Otis handles the technical parts, with you beside him for anything in the shop's name.

What you're getting

The website your customers see

- Your services, case studies, FAQs, the about-you page, and your contact details and map
- Online booking with a $75 deposit paid by card, and a ticket number the customer can use to track their bike
- A contact form that sends messages straight to you
- The frame-geometry calculator and the "what's wrong with my bike?" questionnaire
- Privacy, terms, refunds and cookies pages (drafts, to be checked by a lawyer)
- Set up so Google can find the shop, and so a shared link shows your logo and name

Your Command Center (behind your owner PIN)

- **Work orders:** every booking, and each job's status from booked to ready for pickup
- **Getting paid:** invoices worked out from your own prices, emailed as a PDF, or sent as a card pay link. You can also record cash or check. Balances update by themselves.
- **Customer messages:** everything from the contact form, in one place
- **My Rates:** your prices, labor rate, shop supplies and sales tax, in one place
- **Marketing:** assistants that draft your Instagram, Facebook, TikTok and Google posts from your real jobs. They also draft replies to messages and reviews, review requests, and emails to customers who opted in.
  - You can preview each post on a phone screen with your own photo or video before approving it.
  - **Nothing is posted or sent until you approve it.**
  - A morning email tells you when something is waiting.
- **Photos and videos:** change the site's pictures and add your own videos from your phone
- **How Do I…?:** step-by-step help for every part of it

The plan: four steps to launch

1. **Set up the shop's accounts** (Paul and Otis together, about 1–2 hours)
   - We create the accounts the site runs on, in the shop's name and on the shop's card: the web address, hosting, Shopify for card payments, email sending, and the marketing assistant.
   - You choose your own owner PIN.
2. **Otis puts the site on its web address** (Otis, about half a day)
   - He connects the accounts, checks everything works on the real address, and confirms your bookings are kept safely between updates.
   - The site is up but not announced: don't share the link until launch.
3. **Your trial run** (Paul, over 1–2 weeks, around your normal work)
   - You use it as the shop will: book a test job, move it through the shop, invoice it, take a small real payment and refund it.
   - Approve and post one real week of marketing.

    - A step-by-step checklist walks you through it. If anything doesn't work the way the shop needs, screenshot it and send it to Otis. Nothing you do in the trial can harm anything.
4. **Sign off and launch** (Paul and Otis)
    - When every item on the checklist works, the policies have been reviewed, and the questions below are answered, Otis clears the test data and you announce the site.

What we need from you

The site only says things that are true about the shop. These are things only you can confirm or provide. Tick each one as you send it to Otis.

Facts to confirm

- [ ] How long you've been in business: the site says both "Est. 1998" and "30+ years". Which is right?
- [ ] "1,200+ frames and chassis aligned": is that number right, or should it change?
- [ ] The case studies on the site (the Road Glide, the FXR, the Indian Challenger, the Milwaukee-Eight): are these your real jobs? If not, which real jobs should replace them?
- [ ] What the "zero-tolerance precision guarantee" covers, and for how long

Photos

- [ ] A good photo of you (the About Paul section currently shows a placeholder)
- [ ] Photos of real jobs to replace the stock photos. You can upload these yourself in Owner Photo Control once the site is up.

Money

- [ ] Your real prices, entered in My Rates during the trial
- [ ] Your sales-tax rate, and whether repair labor is taxed, checked with your accountant before you invoice a real customer

Decisions

- [ ] **Reply time:** do you want the contact form to promise a reply time (for example "Paul replies within one business day")? Only if you can keep it.
- [ ] **Reviews:** which of your Google reviews may the site quote, word for word? And your Google review link, for the review requests.

- [ ] **Visitor numbers:** do you want to see how many people visit the site? The simple option sets no cookies and needs no pop-up. Google Analytics would need a cookie banner.
- [ ] **Policies:** fill in the highlighted gaps in the Privacy, Terms, Refunds and Cookies pages (for example, what the $75 deposit covers and when it's refunded), then have a lawyer look them over

Your accounts, running costs, and keeping it safe

The site runs on a few services. Each one is **in the shop's name and billed to the shop directly**, so you own everything and nothing depends on Otis's accounts.

Service	What it does	Cost
Web address (domain)	theframeshop.com or similar	Yearly fee to the registrar
Hosting (Railway or Render)	Runs the website and keeps your records	Monthly, based on use
Shopify	Takes card payments for deposits and invoices	Your Shopify plan plus card fees
Resend	Sends invoice PDFs and your morning email	Has a free tier; paid plans above it
Anthropic (Claude)	The marketing assistants	Pay per use, with a **monthly spending limit** you set
Google AI Studio	The "what's wrong with my bike?" assistant	Pay per use, with a **budget alert** you set

Otis will go through each price with you when you sign up, so you see the current figures before agreeing to anything.

The Anthropic limit is a hard stop: the assistants simply pause if it's reached. Google's budget only warns you. So the site also caps how many diagnostic questions it answers per day, and the marketing assistants have their own daily cap too.

Keeping it safe

- Your owner PIN is yours. Choose one nobody else knows. The site refuses to go live with the demo PIN.

- Account passwords and keys are typed straight into the hosting settings. Never email or text them, even to Otis.
- Your records (bookings, invoices, messages) are stored on the hosting company's permanent disk, which also keeps rolling copies. Otis will set up regular backups.
- Customer names and contact details are never sent to the AI assistants. Marketing emails go only to customers who ticked the offers box, and each has an unsubscribe link.

Launch day and after

On launch day

- Otis clears the trial bookings, invoices and messages, so the site starts clean.
- The policy pages lose their "draft" notice once the lawyer has approved them.
- Share the link on your Instagram and Facebook. It shows the shop's card with your logo. Google finds the site over the following days.

Every week (about an hour)

- Open **Marketing → To approve**. Read each draft, fix anything that isn't right, preview it on the phone screen with your photo, then approve and post it.
- The morning email tells you when something is waiting, so you don't need to check every day.
- Keep adding tech notes to finished jobs. The assistants write your posts from them.

If something doesn't work

Take a screenshot, write down what you tapped just before, and send both to Otis:
